

Dimensional control consists of acquisition, processing and presentation of geographic and geometrical information. The information is used as basis for construction, prefabrication and mating of constructions as well as verification and control.

Parker Maritime (Blom) dimensional control includes:

- Offshore platforms, piping and structures
- Lifting and mating operations
- Petrochemical plants
- Subsea structures
- [Alignment](#) of machinery, pumps, fans, shafts etc.
- Helicopter geometry checks
- Guide rails and skid beams

- [Brochure about Dimensional Control](#)
- [Special assignments and metrology, mating operations etc.](#)
- [GPS surveying](#)
